

ASSESSMENT BRIEF

Programme	All BSc Computing Programmes		
Module Title	Database		
Module Code	CMP020C106S		
Module Level	4	Assessment Type(s)	Report
Word Length / Duration	None	% contribution to module mark	%40
Deadline (date & time) for Submission	4 th of March 2026	Format/Location of submission	Moodle Report Submission
Assessment Feedback date:	1 st of April, 2026		
Learning Outcomes LO1: Practise business database design		Employability and Professional Skills This assessment has been designed to provide you with an opportunity to demonstrate your achievement of the following skills, which are critical in professional contexts and employment settings. By successfully completing this assessment, you will be able to: • Apply analytical and problem-solving skills to translate business requirements into effective database designs. • Use equivalent industry-standard tools and techniques to develop Entity Relationship Diagrams (ERDs) and physical data models. • Demonstrate attention to detail and accuracy in data modelling and documentation. • Communicate technical concepts clearly and professionally in a business context.	

Assessment Requirements

*This is a **group work (up to 2 students per group)**. Each of team member may receive same mark for their submission.*

Please clearly indicate all students' name and IDs in your submission.

Task:

In this section, you are expected to describe an overview of your idea of the DBMS you want to design and develop, what are the business questions based on what you will cover in your system. You will need a good logical relational database management system representation (ERD) based on your proposed idea. This includes Formal Data Modelling with detailed features of your system.

Your submission must be a single report (PDF) and should contain:

- Business system summary based on the chosen topic.
 - Describe your business idea in detail.
 - Describe work objectives.
- An ERD (logical schema) of your proposed idea using an appropriate tool (It is required that your ERD contains **12-14 distinguish Entity sets** in it).
 - Indicate key attribute for each entity set.
 - Indicate cardinality for each relationship.
 - Indicate participation for each entity related to each relationship.
- A diagram (**physical data model**) which **fully match the ERD**, should clearly shows:
 - All tables
 - Columns within each table
 - Constraints including data types and Keys (Primary Key and Foreign Key)

Deliverables (what you will need to submit): a single report (PDF)

Additional Information:

To properly design your business database, you may need to perform some literature review. If you have used ideas from anywhere other than the lecture notes and tutorial examples (e.g., from a book, the Internet, or a fellow student) then include a reference showing where ideas came from and label your content carefully to show which parts are borrowed.

Please be aware that diagrams in your submission must be fully original.

Diagram For Examples:

Example for expected ERD form as follow:

....

Example for expected Physical Data Model form as follows (fully match above ERD):

Marking Criteria				
Criteria	Excellent	Satisfactory	Not Satisfactory	Not Attempted
Idea: the suitability of the idea for a RDBMS	The idea requires a RDBMS and has been well specified.	The idea would require a RDBMS to manage although the idea is not fully specified.	Idea is simple and could be managed without a RDBMS.	No idea provided or idea unsuitable.
Purpose of RDBMS: how well defined the purpose of the DBMS is.	The RDBMS purpose is clearly defined and represents a good use of a DBMS.	The RDBMS purpose is clearly defined although does not clearly represent a good use for a DBMS.	The RDBMS purpose is not clearly defined.	Purpose of the DBMS not given, or purpose ill defined.
Entity Relationship Diagram: The quality of the physical data model provided.	ERD provided is correct and fully complete for the problem at hand.	ERD provided is basically correct, need improvement to fully address the defined database problem.	ERD provided has some omissions and incorrect features.	No ERD provided or ERD is grossly misleading.
Physical Data Model: The quality of the physical data model provided.	Data model is correct and fully match ERD provided Fully address the problem at hand.	Data model provided is correct although not fully complete.	Data model has some omissions and incorrect features.	No data model provided, or data model is grossly misleading.
Submission: To provide a submission that meets the requirements given.	Correct files submitted with no issues.	Correct files submitted only but some issues with files provided, e.g. improper format of submission.	Correct files submitted but with unwanted files provided and possibly issues in files provided.	Incorrect files submitted.

Assessment Success Guidance

To achieve maximum success in this task:

- **Select a suitable business idea** that clearly requires a relational database (complex data, multiple entities, clear relationships).
- **Define clear objectives** and key business questions your system will address.
- **Develop a detailed and accurate ERD** with 12–14 entities, showing primary keys, relationships, cardinality, and participation.
- **Create a consistent physical data model** that fully matches your ERD, including tables, data types, and key constraints.
- **Present a professional, well-structured report** (single PDF) with clear sections and original, well-labelled diagrams.
- **Demonstrate professionalism** through clear communication, correct referencing, and attention to detail.

Assessment Guidance Support and Formative Feedback

You may refer to the lecture notes and lab exercises from Weeks 2 and 4 available on Moodle to support the development of this coursework.

Contact for Queries/ who you can contact for further information or queries

Should you have any questions or require support, please contact the module tutors, Wei Li and Kimia Aksir. Their contact information can be found at the top of the Moodle page.

Use of Artificial Intelligence (AI)

The assessment is designed so that the use of AI during the assessment is irrelevant or impossible. You are welcome to use AI to support learning and preparation for this assessment. Please make sure you read and understand the assessment guidelines and ask your Module Leader if you have any questions. You can find the guidance on the use of AI by using the following link.

Please read and apply:

<https://roehamptonprod.sharepoint.com/sites/portal/information/LTEU/Documents/4a%20AI%20principles%20and%20guidance%20-for%20Senate.docx>

**You can find the student guidance on the use of AI in the Library and Nest*

Referencing

Students do not need another resource, book, article to complete this assignment. In case they use another online/offline resource, they must cite it in the References section, at the end of the report.

If you do so, please use IEEE style: <https://www.citethemrighttutorial.com/course-modules/ieee>

Mitigating circumstances/late penalties

Sometimes circumstances outside of your control may affect your studies and might prevent you from submitting work on time or attending an exam.

The University offers the ability for students to request additional time to complete an assessment or to defer an examination to a later date. If you are finding yourself in such a situation, please speak to your Academic Guidance Tutor, the Roehampton Student Union (RSU) or someone in the [Wellbeing team](#) first, who can support you. Further details can be found on the [mitigating circumstances portal](#).

If you do not apply for or are not approved for Mitigating Circumstances, late penalties will apply. If work is submitted up to 14 days late, the mark will be capped at 40%/50% (delete as appropriate); if it is over 14 days late, it will not be marked.

Resubmissions and Reassessment

If you are required to resubmit this assessment or take part in reassessment, you will be notified via Moodle and your student email. Please ensure you check both regularly. Any reassessment tasks will follow the same learning outcomes and criteria.

Submission Checklist

Before you submit, ask yourself:

- Have I fully answered the assessment brief?
- Have I met the word count and formatting requirements?
- Is my referencing complete and accurate?
- Have I declared any AI use honestly?
- Have I proofread my work?
- Am I submitting through the correct platform before the deadline?
